Re: Edge Concrete, LLC Recommendation

To Whom It May Concern:

Edge Concrete's work on the water feature and mineral pools/spas at Glad Spring Spa at Suncadia is a testament to the craftsmanship and artistry of this firm. Having been able to work hand in hand with them on this project confirmed the praises of quality I had heard from others who had worked with them in the past.

They worked diligently to understand the constraints of the project, the intent of the design, and what needed to occur to meet the timeline and fulfill the wishes and desires of the design team and the client. They took the time to thoroughly review the project and the site to understand the engineering and the aesthetic results that would be produced. They were able to use this knowledge to further enhance the project.

They brought a level of detail to the execution of the project that created a unique realism. The stream and mineral pools they created appeared to be naturally occurring features rather than crafted and carved. This realism added to the sense of being in the woods and was a critical part of the success of the design.

In working with them I felt as if they were a collaborator in the development, design and execution of the project. They actively engaged me in the project and heeded my opinion and ideas as well as introduced creative and enlightening ideas themselves.

Edge's team brought a professionalism, craftsmanship, and artistry to this project that only a few contractors do. I would recommend them for work on any themed environment work and water features with the knowledge that they will provide a finished project that is on time and meets, if not exceeds, all of your expectations.

Sincerely,

The Berger Partnership PS
